  - Project communication and risk management
- Plan, scope, estimate, manage and oversee delivery
  - Seamless integration with our MACD service
- Management of large-scale, multiple location projects

# SECURE PATH NETWORKS PROJECT MANAGEMENT SERVICES

Our Project Management service highlights Secure Path Networks' commitment to our clients as partners. We perform on behalf of our customers to help them complete projects on-time and under budget. We apply our industry expertise, experience, and leadership skills, to assist our clients in achieving their goals through the completion of these projects and associated tasks.

## **Dedicated Project Management and Business Partner**

With each project that we take on, a dedicated project manager is assigned. They serve as the primary point of contact to our clients and direct focus of the projects' deliverables and status. Our project managers work diligently until the project is completed and all expectations met or exceeded.

## **Measure Twice - Cut Once**

Proper planning for a project is paramount to its success. Through the efforts to define the scope of the project in line with our clients' business needs, we ensure that all avoidable risks are eliminated before the project commences and proper expectations set. It is common, however, for large scale projects to have issues that arise that impede progress. Through consistent tracking, reporting, and communications, we do our best to anticipate issues before they present themselves and execute a plan to mitigate the impact.

## **Quality Assurance is Included as a Standard Option**

Every project that we manage must meet or exceed our clients' expectations. Being involved in the definition of the project's scope, in line with our clients' business requirements, helps us to understand exactly how to achieve those objectives. Beyond the completion of each of the phases of the project, we have also built in steps where we verify tasks are completed without issue.

## **We Thrive on Challenges**

Our project management team is experienced in large-scale deployments. There is no project too small or too big. We handle each project with the same approach. When quality and performance are vital to the successful implementation of a project, we go beyond the norm to solve difficult challenges. When traditional methods don't present the expected outcome, we think outside-the-box and offer ways to better alternatives.

Simply put, we deliver the benefits that justified our clients' investment in our services and the project.
